The Environment

- Teacher's Insights -

At a Glance

-  60-120 minutes
-  B1, **B2**, C1
-  accuracy with advanced numbers, see right →

Preparation

-  0-5 minutes
- Download the presentation and make sure it displays correctly on your screen.

Slides Summary

- cardinal numbers in both British and American English
- negative numbers and decimal numbers
- ordinal numbers and their use in dates
- common fractions
- years, understanding the different conventions for different periods
- various ways to say the number 0
- different amounts in euros, dollars, and pounds, including dealing with cents, pennies, and larger amounts.

Definition:

This workshop on numbers (in all their complexity) is designed for B1+ students to improve both accuracy.

Timing:

This workshop will likely take over one hour, depending on how much students need to stop, ask questions, and repeat. The recommended time is 2 hours for B1, getting a little shorter and closer to an hour for C1+.

Insights:

To make sure this workshop is as fun and enjoyable for students, give real-life examples, allow them to ask questions, and make sure that they participate throughout.

Otherwise, the workshop is very self-explanatory. You simply go from slide to slide. You can choose whether to read the texts to them, or get the students to read it for you. Do make sure you give them enough time to practise, ask questions, and (most importantly) make mistakes so that you can help them.

Have fun!
